Education

B.S. in Computer Science

August 2014 - May 2018

Emory University, Atlanta, GA

Skills

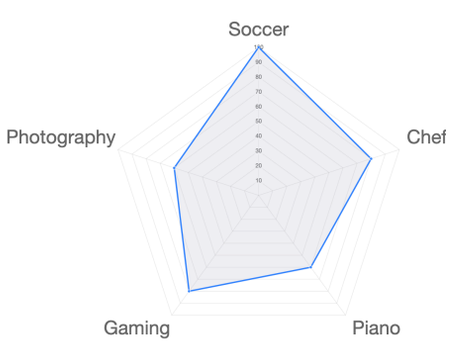
Programming Language:

Python, Scala, Java

Tool & Framework:

Spark, Airflow, AWS, Kafka, Terraform, Looker, Docker, K8S, PagerDuty, DataDog, Kafka

Personal



Software Engineer with 7+ YOE delivering data platform driving business success.

Experience

Site Reliability Engineer @ Peloton

2023.11 - Present, New York

- **Led the design and optimization of high-throughput, low-latency data streaming pipelines**, serving as the in-house expert for a team of 6 engineers, ensuring seamless data flow and real-time processing.

- **Managed and scaled data platform infrastructure** across cloud environments, focusing on performance tuning, cost optimization, and high availability to support business-critical applications.

- **Developed and maintained observability frameworks**, integrating Prometheus for metrics collection and centralized logging systems to monitor client and compute resources, enhancing system reliability and incident response.

- **Architected and maintained a robust data lake solution**, implementing Debezium-based Change Data Capture (CDC) streams into Apache Hudi, facilitating efficient storage and query capabilities for large datasets.

- **Engineered data integration pipelines** connecting Redshift, RDS, and DynamoDB, enabling seamless data migration and synchronization to support analytical and operational needs.

Data Engineer, Tech Lead @ Stash

2021.06 - 2023.10, New York

- Led a team of 4 data engineers in designing, building, and maintaining a modern data platform supporting data ingestion **(Airflow, Spark, Kafka)**, governance **(Deequ, DataHub)**, and analytics **(Looker)**; mentored junior engineers and led code/design reviews.

- Led team operation with an on-call system **(Datadog + PagerDuty)**, reducing pipeline **failures by 80%, and cut AWS costs by 20% through** optimization initiatives.

- Delivered high-quality datasets to the Data Science team, powering production machine learning models for **fraud detection, personalization, and customer lifetime value (LTV) prediction**.

Data Engineer @ Tiltingpoint - 2019.09 - 2021.06, New York

- Data pipeline, platform, visualization development

Associate Data Scientist @ HEED - 2018.09 - 2019.09, New York

- Statistical model, Business Intelligence Dashboard development
